

# RentACar

The system will enable customers to rent a car for a particular period of time.

The customer can choose between a variety of categories of cars, each category has a fixed price per day, the total amount to be paid is the number of days that the car will be rent \* The price per day.

A car is rented per day ( a period of 24 hours ), the user must select the pick up time, and must return the car at the same time on the last day of the period.

The system should have a cart page where the customer can checkout the order and make the payment.

The payment can only be made by credit card or apple pay, after the payment is made the customer receives a notification by email.

To be able to make and order the customer must be logged in, the system must have a register/login page.

The required information for register are:

- First name
- Last name
- E-mail
- password

It should be explicit for the user that the order is for a category of car, if an specific car is not available at the time the customer will receive another car of the same category or better.
